

1   **Abstract of the Disclosure**

2           This patent teaches a machine for measuring angles over multiple simultaneous  
3   axes and calculating the compounded angle using tilt sensors and/ or accelerometers,  
4   and including provision for establishing a baseline or zero point for each axis plus a  
5   micro-processor that receives inputs from the tilt sensors, converts them into  
6   measurements of angles, may calculate the compound angle(s) thereof, displays the  
7   results and, on demand, records the results in memory.
